I don't
care
about
your
agile
process

Preface

Don't be mad Im just a developer.

Trigger Warning

- Oppinions ahead!
- Everything is on a gradient (even if I might hint otherwise)
- There are no universal truths, context matters!
- I welcome any different oppinions to my points ❤

~~Why should we listen to~~

Patrick

- 10+ years experience in prof. software development
- 3 years as Lead Dev
- 85% of projects used variation of Scrum or Kanban
- 0% of projects done agile

If you wanna talk, rant, discuss agile, reach out to me :)

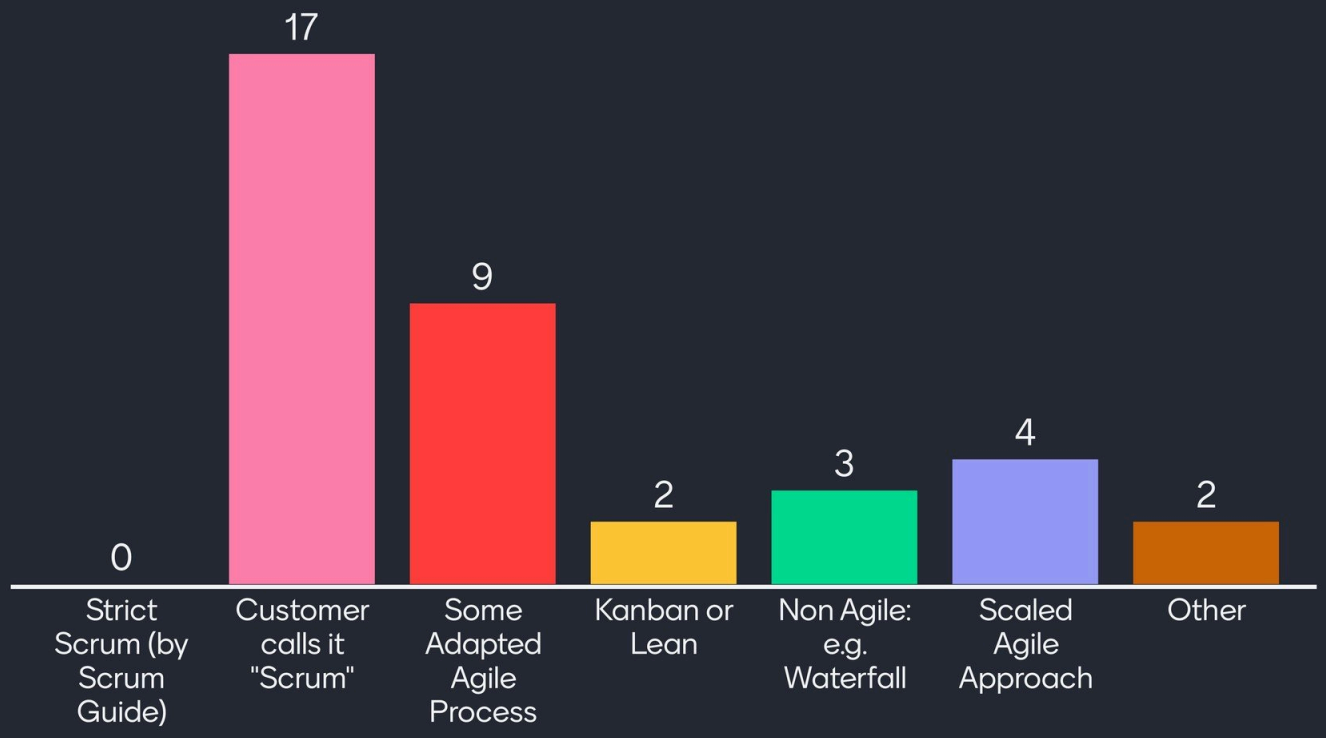
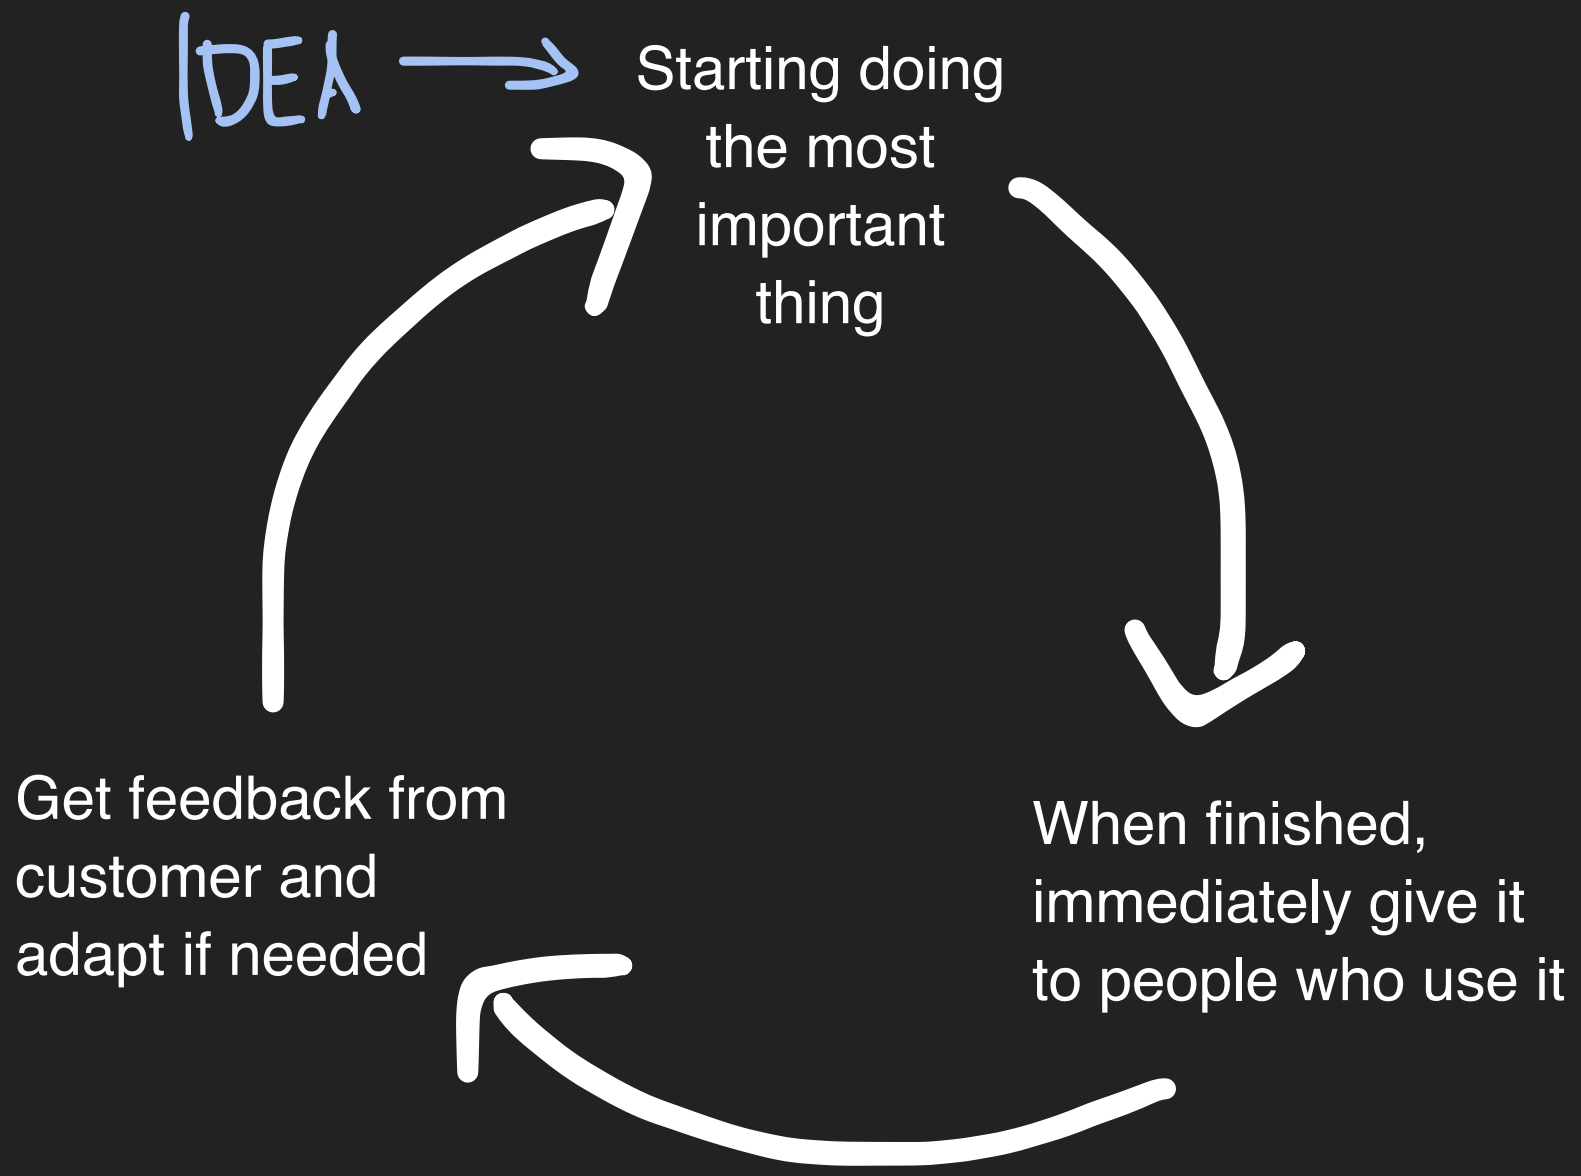
How do you Develop Software ?

Mentimeter



37

Agile is simple



This also applies to the process itself!

Allen Hollup (probably)

Main Concepts:

Customer

VALUE

PRIORITY

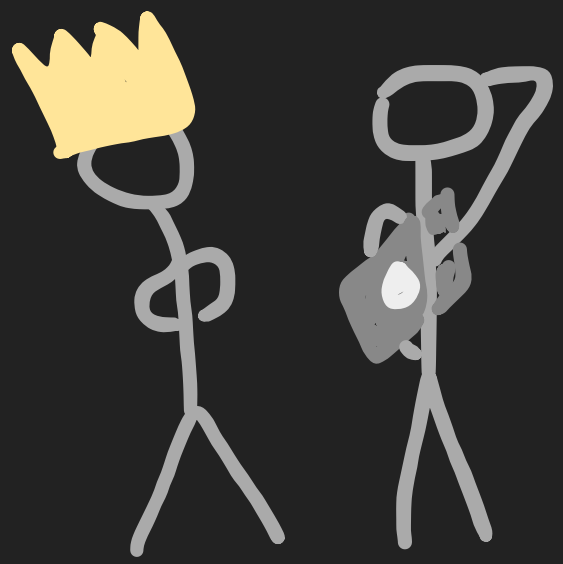
Iteration

Customer

Means we are not doing it for ourself.

What is a customer?

Somebody that pays or consumes your product (I guess).



Tech people MUST directly talk to the customer.

Everybody MUST understand the business model.

VALUE

But what is VALUE?

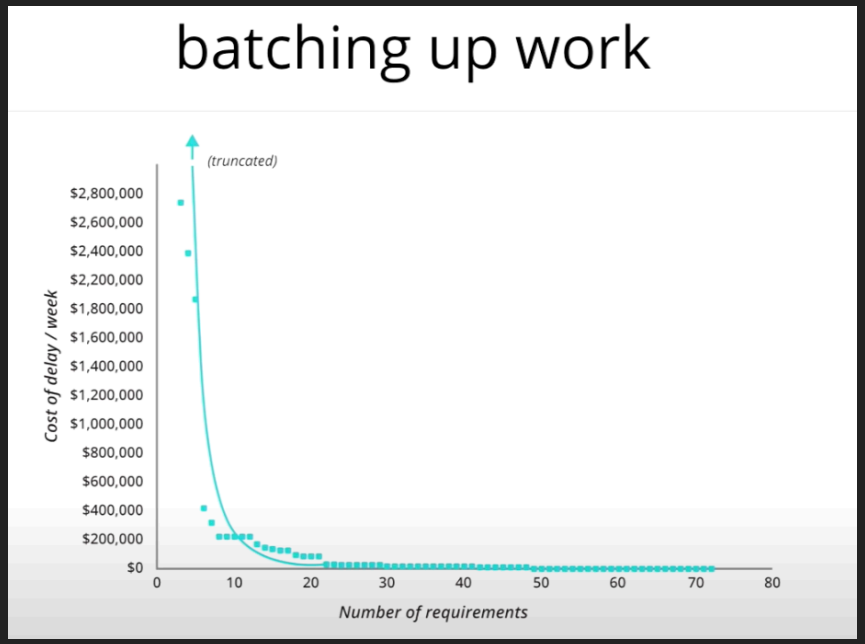
Something that solves a problem?
Something that makes the business money?
Something that the customer wants?

If the customer DOESNT want to pay for it,
can it EVER have VALUE?

Value needs to be measured by data

Other Methods

- A/B Testing
- Business Metrics
- Experimental: Hypothesis, Test, Measure



The cost of NOT delivering something.

Jez Humble, Lean Enterprise

Estimates

Estimations

are mostly USELESS

1.

Dev Cost does not have big impact on ROI or lifecycle profit.

Douglas Hubbard

2.

Estimation for duration is notoriously inaccurate. Best time to ship is right now.

Jez Humble, Lean Enterprise

PRIORTY

Pick the thing with the highest **VALUE** and do that first!

Focus on delivering **VALUE** not work items, stories, etc. (Output vs Outcome)

Iteration

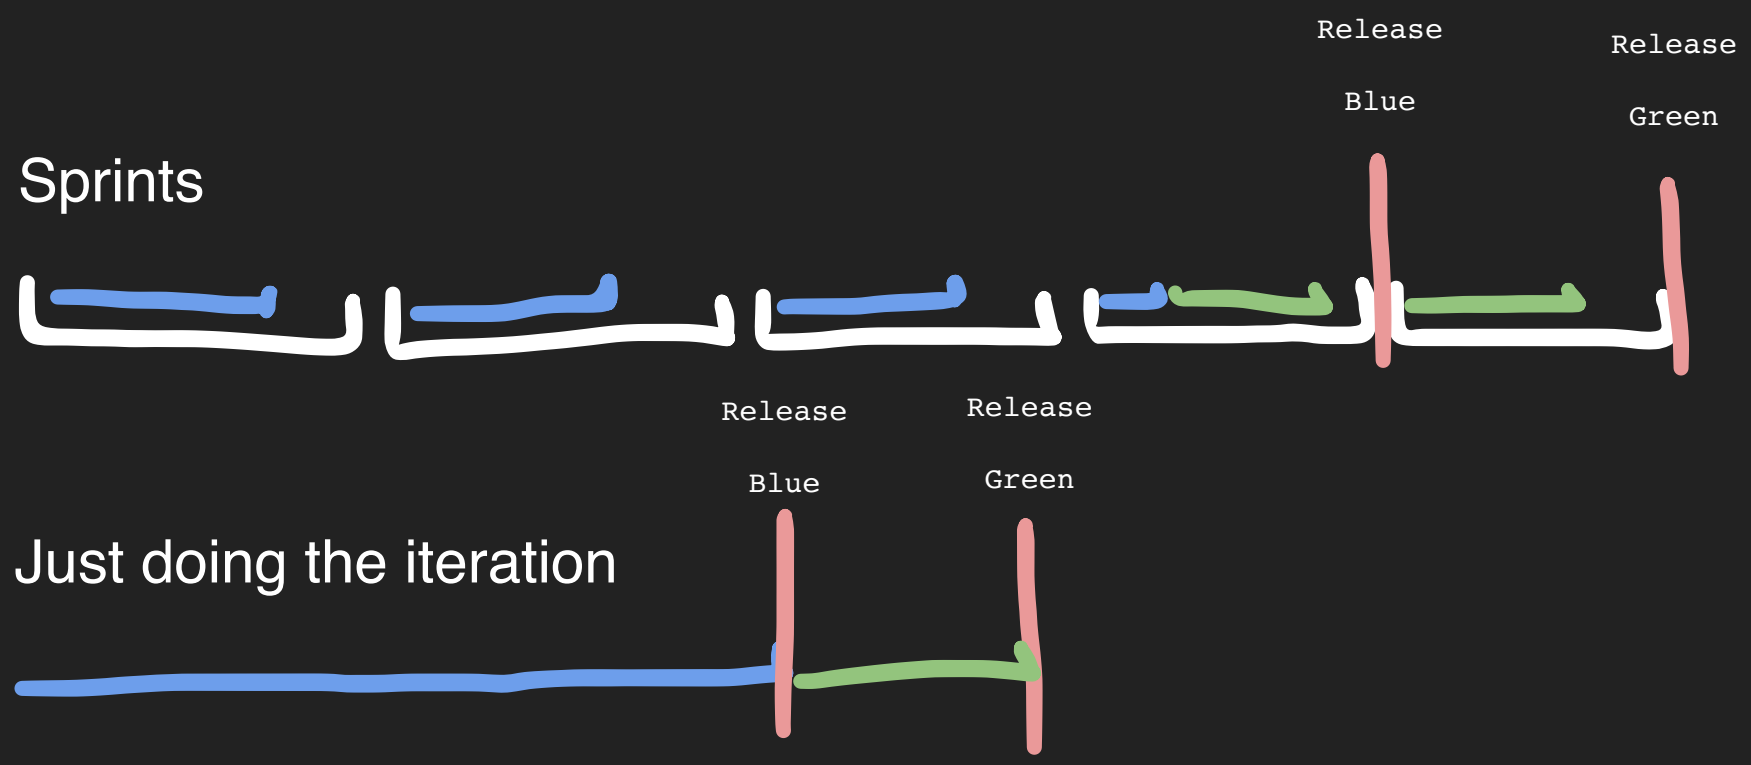
Talk to the customer about their problems.

Find the first scope the customer would pay money for.

That's your first ITERATION.

The "Iced Tea" Iteration

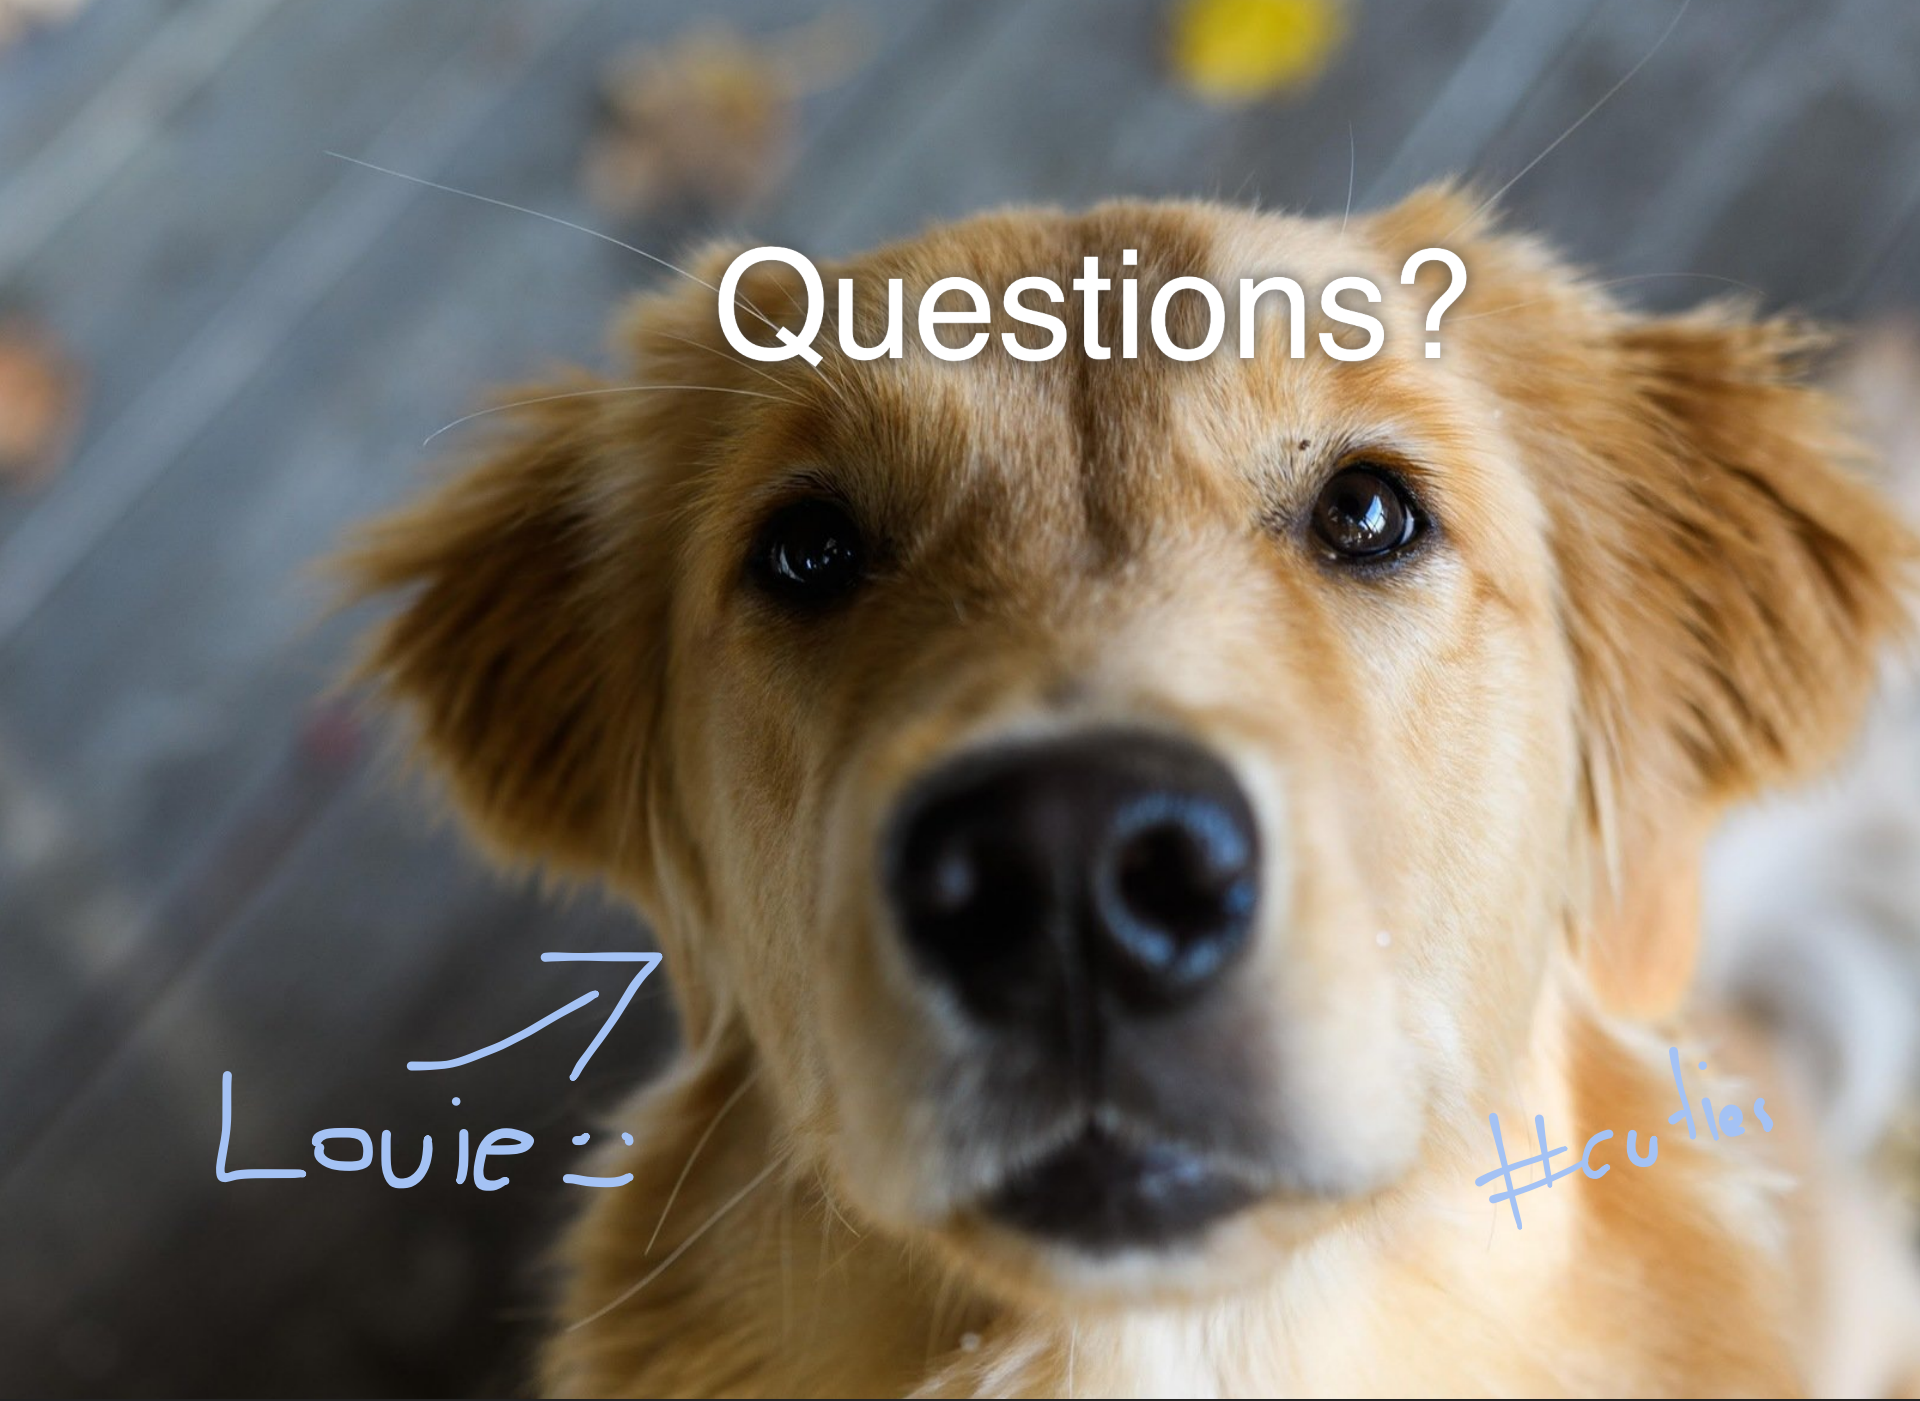
Sprints are stupid



Takeaway

Following specific processes does not make you agile!

Shu Ha Ri: but its fine to start with a known process



Questions?
Louie :)
